

Business Call Lite

Solution Description

BusinessCall LiTE provides customer with a two or four channel solution (analogue or SIP) using LTE as the last mile connectivity to the ECN network. The channels will be connected to the customers PBX via analogue ports on the PBX or a SIP trunk. A single LTE sim card will be provisioned for the connectivity to ECN network with the relevant number of analogue channels connected to the PBX being accommodated on the ECN CPE (customer premises equipment) deployed at the site. The CPE may differ depending on the solution required. This is at the discretion of ECN as to the appropriate equipment to be deployed to meet the solution requirements.

Solution Offering

The service is only available using LTE / 3G as a last mile connectivity. LTE / 3G coverage and signal strength is dependent on the area and location of the modem deployment. An external antennae can be deployed to boost the signal strength, this is an additional charge and not part of the monthly rental rates mentioned in this document.

- **BusinessCall LiTE 2 port, Analogue:** ECN provides the LTE sim card and modem providing two analogue channels back onto the PBX.
- The two port solution can be sold with IN and OUT bound calls.
- Closed user groups are permitted.
- If not ported or ECN numbers allocated, inbound calls are still terminated to the PBX via alternate provider (EG Telkom)
- **BusinessCall LiTE 4 port, Analogue:** ECN provides the LTE sim card and modem. A four port analogue gateway is supplied providing four analogue channels back onto the PBX.
- The four port solution can be sold with IN and OUT bound calls.
- Closed user groups are permitted.

If not ported or ECN numbers allocated, inbound calls are still terminated to the PBX via alternate provider (EG Telkom)

Technical Support

All ADSL lines will be proactively monitored and technical support is available through Nashua ECN's 24/7/365 helpdesk.
